Final Year Project Report

Job Alert & Vacancy App

. Introduction

Job Alert & Vacancy App is an Android mobile application. This app helps users to see job vacancies easily. Users can check job title, company name, location, salary, and job description.

This project is developed using **Android Studio** and **Java language**. The main purpose of this project is to learn Android development and create a simple job listing application.

. Objective of the Project

The main objectives of this project are:

- To create a simple job listing mobile app.
- To display jobs in a list form.
- To show complete job details on a new screen.
- To learn how RecyclerView and Intent work.
- To understand Android Activities and Layouts.

. Tools and Technologies Used

This project is developed using:

- Android Studio

- Java Programming Language
- XML for design
- RecyclerView
- Intent
- CardView
- ConstraintLayout and LinearLayout

. Working of the Application

1. Main Screen

When the app starts, the MainActivity opens.
It shows a list of available jobs using RecyclerView.

Jobs are added manually in the code like:

- Android Developer – Lahore – PKR 50,000
- Web Developer – Karachi – PKR 45,000
- Java Developer – Islamabad – PKR 60,000

Each job is shown inside a CardView with an “Apply Now” button.

. Job Detail Screen

When the user clicks on “Apply Now” button:

- The app opens JobDetailActivity.
- Full job details are shown:
    - Job Title
    - Company Name
    - Location
    - Salary
    - Description

If user clicks Apply button again, a small message (Toast) appears:
“You have applied for this job.”

. Main Components Used

1. Model Class

`Job.java`
It stores job information like title, company, description, location, and salary.

2. Adapter Class

`JobAdapter.java`
It connects job data with RecyclerView.

3. Activities

- MainActivity – shows job list.
- JobDetailActivity – shows full job details.

4. Layout Files

- activity_main.xml
- item_job.xml
- activity_job_detail.xml

. Features of the App

- Shows multiple job vacancies.
- Displays job details clearly.
- Simple and clean design.
- Easy navigation between screens.
- Apply button functionality.

. Advantages

- Easy to use.
- Simple design.
- Good for beginners.
- Shows real-life app concept.
- Easy to upgrade in future.

. Limitations

- Jobs are added manually (not from database).
- No internet connection used.
- No login or registration system.
- Not connected to real companies.

. Future Improvements

In future, this app can be improved by adding:

- Firebase database
- User login and signup
- Search and filter option
- Online job application system
- Admin panel to add jobs
- Push notifications
